THINLINE

Track lock

A major benefit of high density filing systems is that maximum filing capacity can be obtained using minimum floor space. ThinLine provides this while allowing maximum accessibility to all files.

The ThinLine system comprises modular static units with high capacity tiers providing high density storage and filing. Units can feature any number of tiers of a common depth and can be simply rearranged or increased at any time. ThinLine units can also be fixed onto a Roll Away or moving aisle base. For added security ThinLine units can be fitted with lockable tambour doors.

Flexible media storage featuring tambour doors

Flexibility

ThinLine's ingenious design comprising standard or adjustable tiers gives the user complete freedom to house a wide variety of media within the same unit.

Standard tiers are available in a range of depths and heights allowing for the storage of end tab wallets, shelf files, lever arch folders, box files and Woodford boxes. Thin shelf profiles ensure that valuable space is maximised.

Adjustable tiers further enhance the flexibility of a unit as shelf heights can be specified by the user. All types of storage media can be housed in an adjustable tier as shelving slots are located at 25mm (1") intervals, giving adjustable sized openings.

Product features

Roll Away modules are supplied with a track lock located on the bottom of a front row unit. This acts as an additional security feature for the entire system and when locked prevents the units from sliding from side to side.

As well as static and Roll Away units, ThinLine can be fitted onto a moving aisle base. Moving aisle systems can be installed on most existing floors without damaging the surfaces and can be easily relocated with minimal disruption.

A top retainer bar is an added health and safety feature ensuring each Roll Away unit remains stable and upright.

Static or Roll Away units can be specified with or without lockable tambour doors.

A range of filing accessories is available.

ThinLine Roll Away

As your office and filing needs expand, so does ThinLine. From an initial static unit designed to store a single person's records, ThinLine can be easily reconfigured to become a sophisticated Roll Away unit fulfilling an entire departments' filing and storage requirements.

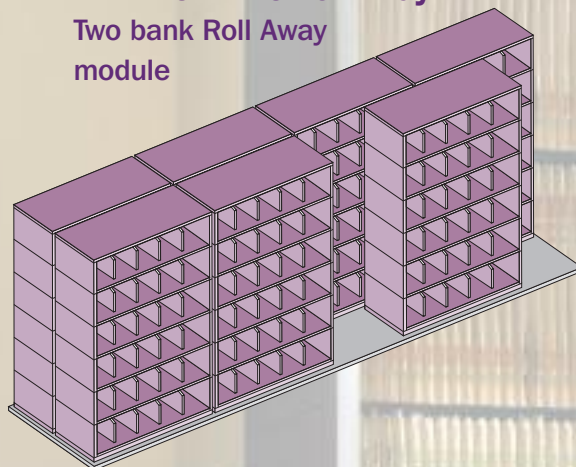

ThinLine Roll Away is specifically designed for easily accessible, high density storage. The system comprises rows of ThinLine units mounted on tracks in front of each other with the rear row fixed. Units glide laterally giving access to all bays of filing, removing the need for gangways.

All rows rest on a common base that need not be anchored to floors or walls, allowing easy relocation or reconfiguration of a system.

Templestock

Media

ThinLine is well suited to store:

- End tab wallets
- FP5/6 Lloyd George Wallets
- Lateral suspension files
- Lever arch folders
- Ring binders
- Box files
- Videos
- DVDs
- CDs

Storage of lateral suspension files

Applications

Due to the system’s flexibility ThinLine is used extensively in the medical and legal professions, local government and financial institutions.

ThinLine can also be configured for bespoke applications, such as storing medicines and museum artefacts.

Teamed with colour coded end tab wallets ThinLine’s capacity makes it an ideal component for developing an effective hard copy Document Management system. Templestock can develop all aspects of a Document Management solution, for further information please contact your Templestock consultant.

Colour range

ThinLine is supplied in our standard colour, Bone White with a smooth finish. Other colours are available as an optional extra in a choice of finishes, examples of which are illustrated below:

	Ebony		Bone White
	Racing Green		Azure
	Violet		Magenta Red
	Graphite		Aluminium

Please note these colours are used as a guide only. They will not represent the exact colour that will appear on the finished product.

Templestock offers a special service that can match a specific colour, enabling entire systems to tie in with corporate colour or interior design schemes. Contact us for information about our colour matching service.

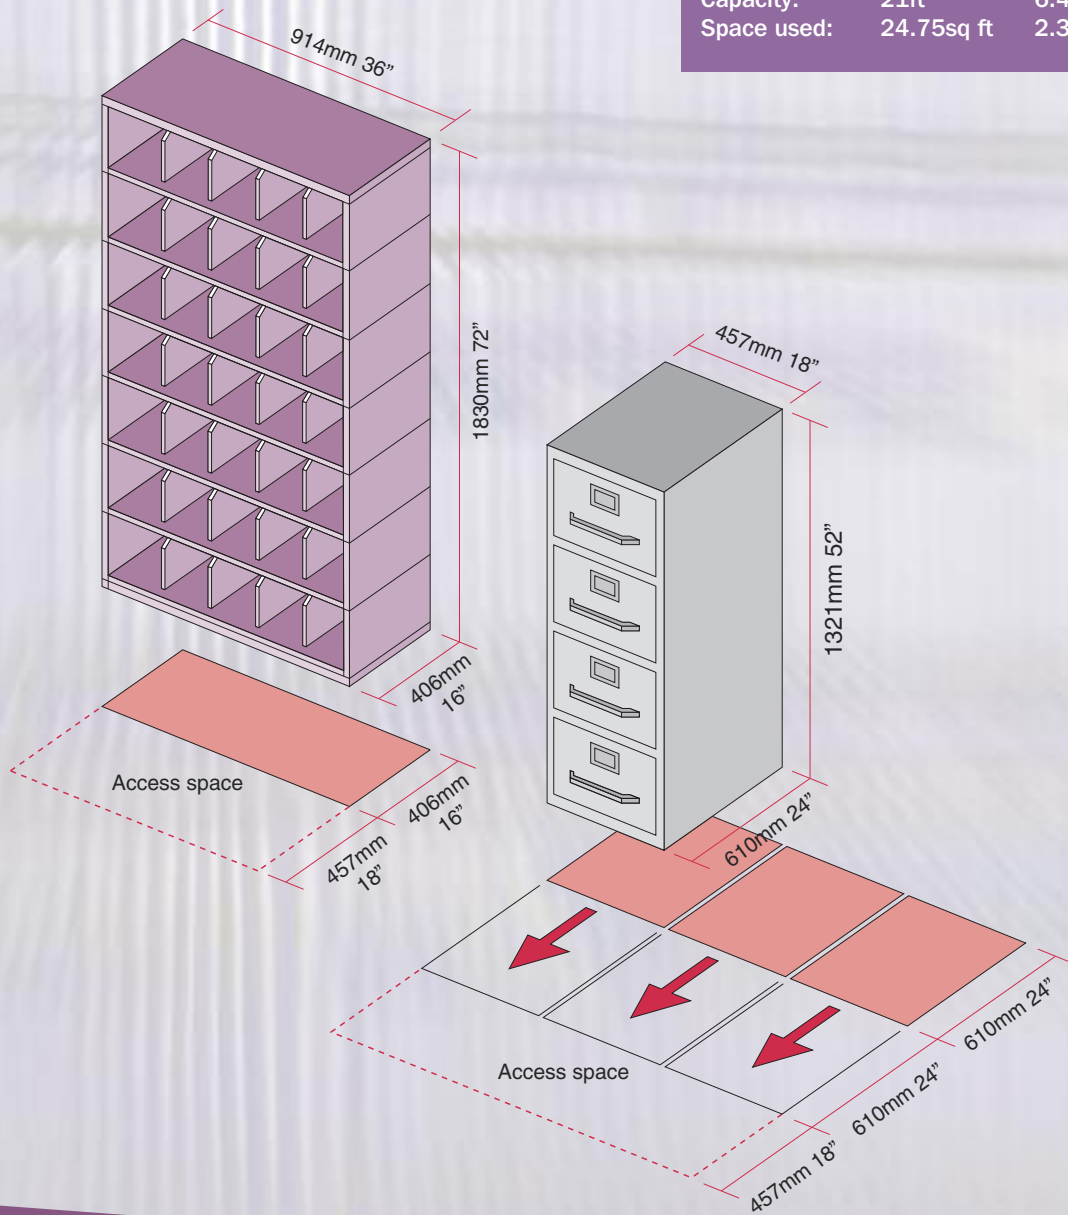

Tambour doors are supplied in Cream as standard. Additional colours, metallic and wood effect finishes are available as optional extras.

The space/capacity comparison

ThinLine is a highly space efficient system providing high density storage.

On average a seven tier ThinLine unit has the capacity equal to three four drawer cabinets and uses less floor space than a single four drawer cabinet, as illustrated below.

ThinLine facts:		
Capacity:	21ft	6.4m
Space used:	8.5sq ft	0.79sq m
Traditional four drawer facts (all 3 units):		
Capacity:	21ft	6.4m
Space used:	24.75sq ft	2.3sq m
